

THEOS Patch Level Update:

Overview:

The Downloaded file called CD.ZIP contains four files. These are:-

GUTENBERG.EXE

MB.CMP

OS50181.IMG

UPDATE181PLUS.CMP

Download the ZIP file, expand it on your computer, then copy the four files onto a CD.

**IT IS STRONGLY URGED THAT YOU PERFORM ANY UPGRADE AFTER YOU
HAVE PERFORMED A FULL SYSTEM BACKUP.
LOSS OF DATA CANNOT BE RULED OUT WHEN DOING THESE
PROCEDURES.**

The files are for updating your THEOS main server computer to the latest version of THEOS (the operating system). Please Note:- These files have nothing to do with the Advance ASSET program from Dealquip, and are not an upgrade for ASSET.

Each file contains data and information that is crucial for THEOS to operate normally and include all the newest feature and fixes from THEOS.

The Files:

GUTENBERG.EXE is the latest version (2.32) of the Gutenberg Printer server software. This software is loaded onto your MS Windows PCs that act as print servers via the network for Gutenberg printing.

MB.CMP is a THEOS compressed file containing a revised version of the THEOS MAKEBOOT program. MAKEBOOT is used to create an Emergency Boot CD for those times when the THEOS server will not boot up on its own due to some form of corruption in the system.

OS50181.IMG is a THEOS Image file that contains the full patch level upgrade to bring THEOS Corona up to the patch level 50181. A THEOS image file can be attached to THEOS as a hard disk and used like any other disk.

UPDATE181PLUS.cmp is a THEOS compressed file containing the very latest updates for the THEOS 50181 patch level.

Installation:

Depending on the files there are specific steps that must be followed when using these upgrades.

Gutenberg.exe:-

This is an MS Windows based program that must be run on your Windows computers. If you currently have one or more computers running the Gutenberg print server software, simply take the CD containing the GUTENBERG.EXE program to those computers and run the GUTENBERG.EXE program. It is a self installing program using Windows Installer. It will replace any earlier versions of the Gutenberg server software. It can be run using 'My

Computer' or 'Windows Explorer' or by using the 'Run' feature from your Start Menu. Simply type "D:\gutenberg.exe" in the run dialog box. (Note assuming your CD drive is D:)

MB.CMP, OS50181.IMG and UPDATE181PLUS.CMP:-

These files are THEOS only files and can only be run on your THEOS main server computer. To install the updates follow these steps (very carefully):-

1. Make sure that every user has logged out of ASSET and that it is safe to reboot the main server.
2. Reboot the main server and when prompted, log back in under **Maintenance Mode**
3. Logon to the **IPL** account.
4. At the 'scrolling' menu press **<break>-<q>** to get to a SYSTEM> prompt.
5. Put the CD you created with the copies of the files expanded out of the CD.ZIP file into the CD Drive of the server.
6. At the SYSTEM> prompt type:-

A I OS50181.IMG:R Press **<enter>**

INSTALL I Press **<enter>**

Follow the prompts and install the 50181 patch level update.

When the 50181 patch level update is completed it is time to install the PLUS Pack.

1. Make sure that every user has logged out of ASSET and that it is safe to reboot the main server.
2. Reboot the main server and when prompted, log back in under **Maintenance Mode**
3. Logon to the **IPL** account.
4. At the 'scrolling' menu press **<break>-<q>** to get to a SYSTEM> prompt.
5. Put the CD you created with the copies of the files expanded out of the CD.ZIP file into the CD Drive of the server.
6. At the SYSTEM> prompt type:-

COPY UPDATE181PLUS.CMP:R S Press **<enter>**

EXPAND UPDATE181PLUS S Press **<enter>**

The files contained inside the compression file will be expanded and written over the older THEOS commands.

Then update the MAKEBOOT command.

At the SYSTEM> prompt type:-

COPY MB.CMP:R S Press **<enter>**

EXPAND MB S Press **<enter>**

Your update is complete.
